

Adverse Event Outcomes

is_probable_duplicate: false

FAERS Adverse Event Outcomes · Q3 2025 – Q2 2026

- One year of FDA adverse-event case reports, every report in four complete quarters, rebuilt nightly.
- These are reporting rates, not risk rates — reporting is voluntary and uneven. Deaths are counted per case, not per symptom.
- The FDA's probable-duplicate flag (~20% of cases) is excluded by default. Cases first received years ago appear because FAERS re-transmits updated versions.

Reports

1.17M

Cases with a fatal outcome

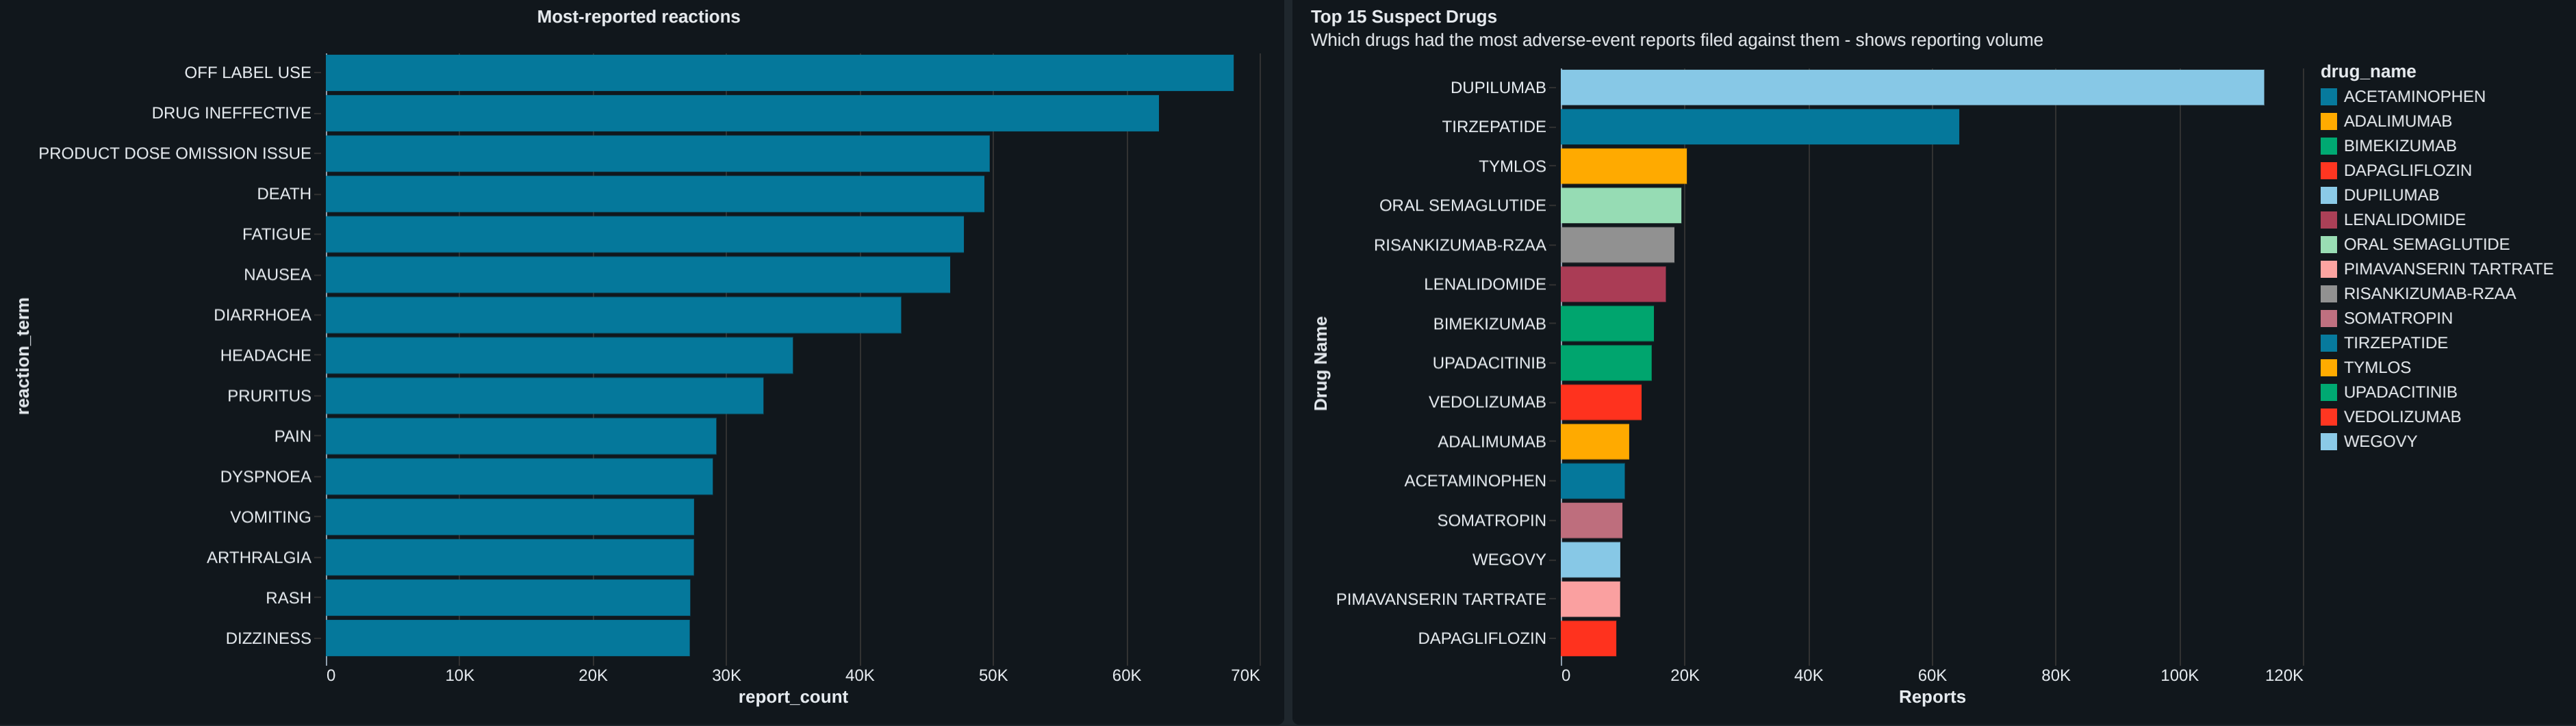

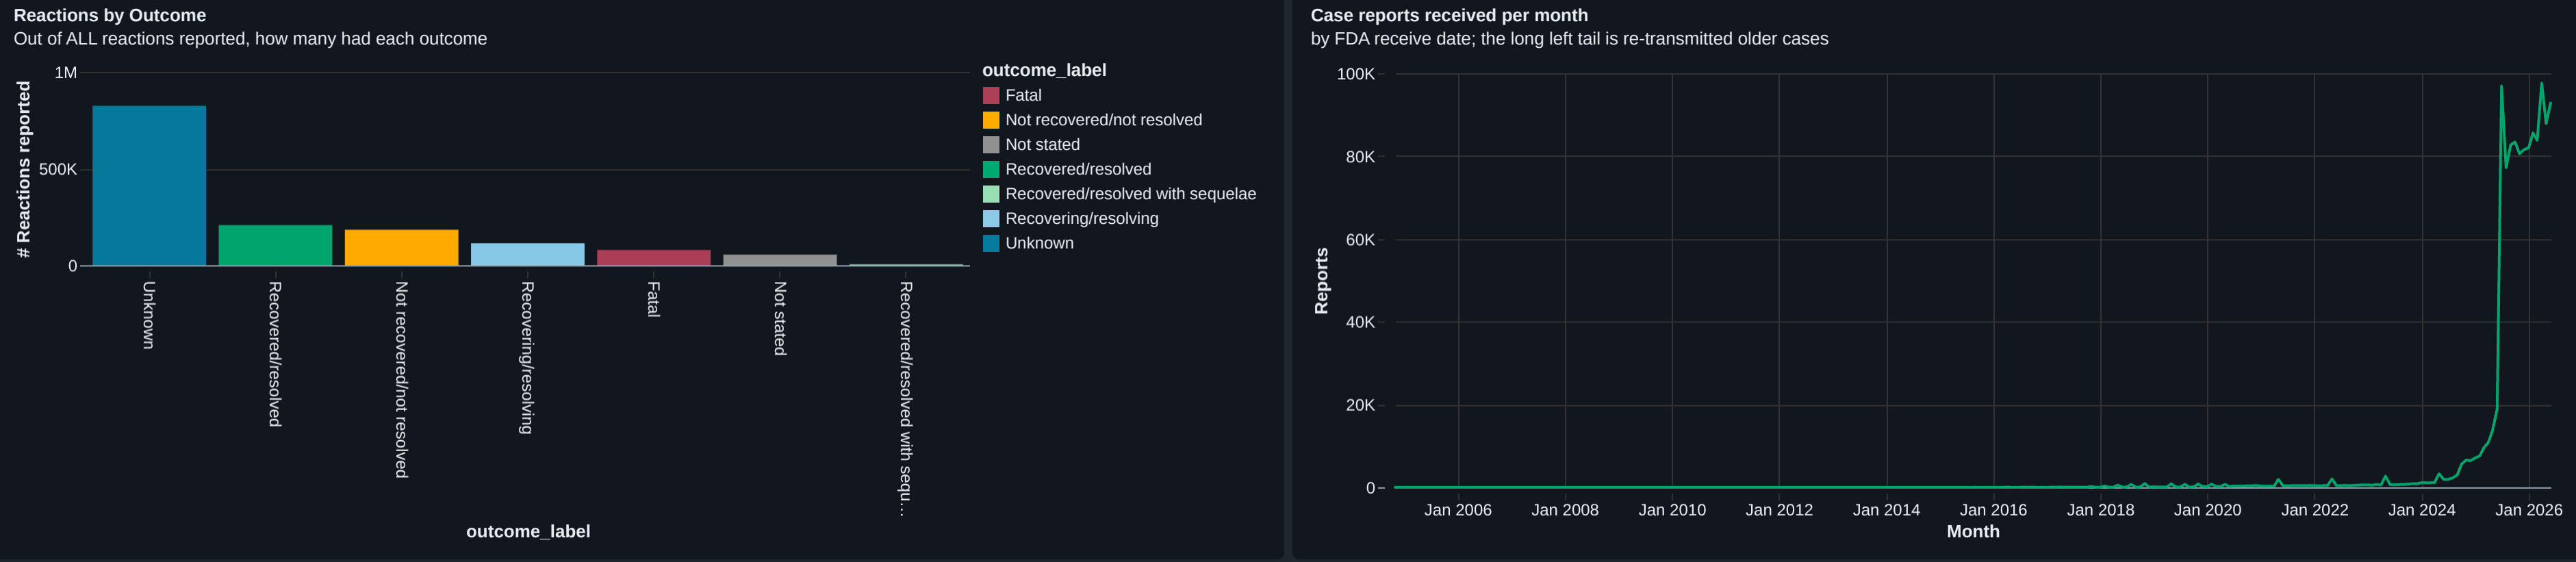

79.04K

Reactions

3.55M
